

Understanding Claude. Day 3

What I'm taking into Day 3

1. Claude is available everywhere: via the command line, web, mobile, and desktop apps.
2. Claude Code does more than generate text. It runs programs, works with files, and shows the output from the software it runs.
3. CLAUDE.md is used for narrowing and tuning Claude's behavior.
4. The Claude API lets you access Claude from your own programs.

Student Progress Coach Project

1. It works as a personal automated coach that watches your own course repo and checks in every morning
2. It tracks your progress over time and gives you recommendations
3. You're not just using it – you're building it
4. It lives in your repo and runs on a schedule
5. It never edits your actual exercise files, never rewrites its own past entries, and never pushes to GitHub – you always stay in control of what goes to the remote.

Student Progress Coach Project

1. Put the setup files to the root of your Bootcamp repository
2. Open **student-exercise-handout.md**
3. Follow the steps
4. Ask questions
